

You may have noticed a few changes around here...

We've been working hard to Keep you safe

Patient screening, face masks, increased PPE, frequent disinfecting, social distancing: we've been following CDC **recommendations** with fidelity.

We've made a lot of positive changes to our safety protocols, but perhaps the most important improvement we've made is how we handle **aerosols** during your procedure.

As you know, COVID-19 and other viral agents can be transmitted through microscopic air-borne particles called aerosols. Our clinic is now **equipped** to reduce aerosols by over 90% throughout every dental procedure.

By using **technology** like our Kona Adapter and Zyris mouthpieces, we place high-volume suction inside your mouth, surrounding our work area to continuously remove aerosols at the source.

Our top priority is always your health, **safety** and well-being. The choices we make to keep you safe are research-based and with your best interests at heart.

- Your Team at Gentle Dentistry
